

Integrating Gender in Medical Education

Susan P Phillips ¹

¹ Queen's University, Kingston, Ontario, Canada

The Gender and Curriculum Project is a unique collaboration amongst all of Ontario, Canada's six medical schools, the Council of Ontario Faculties of Medicine, and the Government of Ontario. Our goal is to improve the medical care of men and women through the development of a collaborative, web-enabled medical curriculum that integrates gender and health into all aspects of medical education. This interactive session for medical educators will:

- Help identify why sex and gender matter in medicine
- Provide practical tips for integrating gender into lectures, small group learning, and assessment
- Describe resources developed by the Project
- Share useful examples of sex differences and gender as a determinant of health
- Offer a "meeting place" for medical faculty who wish to hear how others are addressing gender in curriculum
